

# Thermocouple Connector Manufacturing

We started manufacturing thermocouple connectors at our Bognor Regis site in 1994. By 1996 these were being sold through our major distributor, Farnell, globally.

We offer a comprehensive family of colour coded miniature and standard connectors, accessories, panels, terminal and barrier blocks; manufactured by Labfacility. Available in IEC (European), ANSI (USA) and JIS (Japanese) colour codes.

Due to their location in often adverse environments such as hot working zones of furnaces and machinery, temperature sensors are liable to corrosion and mechanical damage. The need for occasional replacement is inevitable and the use of suitable connectors permits error-free fast, positive and reliable interchange with no risk of dangerous cross connection.

As a key product range for Labfacility, millions of thermocouple connectors are produced and sold all around the World each year.

Our [YouTube channel](#) also features animated 3D CAD videos showing the components used to make up each style of connector.
