

Dinnington Expansion

Labfacility were looking to expand into the Northern UK regions in the early 1990's and purchased Wilgrip Controls Ltd in 1991 - based in Dinnington, South Yorkshire. Founded in 1985, 3 people worked at Wilgrip from the owner, Barbara Wilkinson's home office.

A Northern UK Sales Team were recruited and a 2,000 sq ft unit on the North Anston Trading Estate, Dinnington, was acquired for Labfacility to commence temperature sensor manufacturing. Before long, further expansion was needed and the adjoining unit was also acquired giving a total of 4,000 sq ft 'to build on the quickly expanding production & stores requirements.

The Dinnington Colliery closure in the early 1990's saw the major regeneration of the area, assisted with Objective 1 European monies.

Labfacility bought Unit 3b Outgang Lane, Dinnington, a 7,000 sq ft unit, in 2005. This was built on the previous Pit Baths site.

This was further expanded in 2012 with the construction of a 5,000 sq ft mezzanine floor.

Labfacility expanded further into the adjoining unit 3a giving a total space of 18,000 sq ft. Staff numbers now exceed 30 at this site as we look to constantly increase market share, product ranges and distributor demand.
